Usmaila Abdoul

Software Engineer

I am a Frontend Developer with 4+ years of experience crafting web and mobile applications. Specializing in Next.js, React, React Native, and Node.js, I create high-quality, scalable consumer applications across various industries. I excel in solving complex challenges and thrive in remote environments, collaborating with multicultural teams to deliver impactful projects.

Employment History

Software Engineer at GitStart Community (YC S19), Hong Kong
June 2021 — Present

- Operated as a **full-stack developer** for a distributed engineering team, delivering scalable **public-facing web applications.**

- Developed advanced features across multiple client projects using **React.js**, **Next.js**, **React Native**, **Redux**, **Node.js**. and **TypeScript**, enhancing user experience and functionality.

- Optimized application performance for **Core Web Vitals** using **Server-Side Rendering (SSR)** and **Static Site Generation (SSG)** with **Next.js**.

- Led a team of six developers, managing **Agile workflows, code reviews** and stand-ups to deliver projects on time and withing budget.

- Merged **100+** pull requests, shipping **3,000+** credits in features and driving significant revenue growth for the team.

- Built API endpoints with **Express.js** and databases like **PostgreSQL**.

- Ensured code quality through **unit testing (React Testing Library).**

Frontend Developer at The Sports Media Agency, London
January 2022 — December 2023

- Revamped, and redesigned various sports media websites using **Angular** and **TypeScript**, achieving improvements in **performance optimization** and load times.

- Developed and maintained new features to enhance **SEO** and **WCAG accessibility compliance.**

- Collaborated with designers and backend engineers to integrate APIs, delivering seamless **user-centric features**.

- Conducted **code reviews** and peer mentoring to uphold quality standards in a **collaborative Agile environment**

Frontend Developer at Digital Renter, Cameroon
March 2019 — April 2021

- Designed and developed the Digital Rental cross-platform mobile application using **React Native**, achieving over 1,000+ downloads across iOS and Android platforms.

- Created a Facebook Messenger bot with **Node.js**, reducing customer support costs by **25%** and driving more traffic to the company website.

- Leveraged **React Native** to build cross platform mobile application, driving revenue up and user satisfaction.

- Provided coaching and mentorship to junior developers, fostering a collaborative and **proactive development culture**.
